Crane man baskets

Chain slings

Grade 80 chain slings

Chain slings are lifting devices consisting of one or more legs and are widely used in various sectors, including construction, logistics, and the maritime industry. These chain slings are assembled in compliance with the most stringent current safety standards and are equipped at the ends with Grade 80 lifting accessories such as bells, safety hooks, and shorteners. The use of certified lifting chains and accessories compliant with regulations plays a crucial role in safeguarding safety during lifting and handling operations. Each chain sling undergoes rigorous testing before being introduced to the market and is supplied with an identification tag containing the serial number, ensuring precise traceability. These chain slings are extremely versatile and are suitable for lifting both small loads and larger, more cumbersome operations. Additionally, they easily integrate with our range, connecting between the crane hook and our lifting accessories such as concrete buckets, pallet forks, personnel baskets, self-dumping hoppers, etc. For customized requests and non-standard models, do not hesitate to contact us; we are capable of meeting all your needs!
