Concrete buckets

Concrete skip washing platform

Washing platform for concrete buckets

The washing platform (PL) represents the optimal solution for cleaning concrete buckets on construction sites. It allows positioning the buckets at an angle on an elevated platform, ensuring a safe and clean environment for the operator during washing operations. Equipped with an access ladder, handrail, various lashing points, a non-slip surface, and a collection basin (MPL) that ensures the containment of washing water and residues resulting from the bucket cleaning process. This model is easily disassembled for transport and storage and can be subjected to a hot-dip galvanizing process for effective corrosion protection, providing resistance and durability over time. Our products are built and tested in compliance with the strict UNI EN ISO 12100, UNI EN 13854, ISO 8686, UNI EN 10027, and UNI EN 10204 standards. Each product comes with a metal ID plate, certificate of conformity, and user and maintenance manual to ensure proper use over time. Additionally, all our products are covered by a one-year warranty in compliance with the European Directive.
